Summary

Internet Systems Technology graduate focused on Python back-end development and seeking my first professional opportunity. I build personal and academic projects with REST APIs, JWT authentication, permissions, relational databases and automated tests. React and TypeScript complement my web application integration skills.

Technical skills

Back end: Python, Django, Django REST Framework, FastAPI, Pydantic, REST APIs, JWT and OpenAPI.

Data and quality: SQL, PostgreSQL, SQLite, unittest, automated testing, Ruff, Git, GitHub Actions and Docker Compose.

Complementary: React, JavaScript, TypeScript, Vite, HTML and CSS.

Personal and academic projects

Support Tickets API | Python · Django REST · JWT · PostgreSQL

- Support-ticket API with user and staff permissions, status transitions, internal comments and a persistent change history.
- Transactional outbox notifications, OpenAPI documentation and tests for authentication, isolation and business rules. Local demo; CI also validates PostgreSQL and Redis/Celery.

Takion Campus | Django REST · React · Vite · PostgreSQL

- Independent academic platform, evolved from UPA Portal Acadêmico, with student, teacher and administration workflows.
- Front-end and API integration, role-based access, courses, grades, attendance and authorized file access; back-end and front-end tests and CI checks.

Biya Parallel Worlds | React · TypeScript · Vite

- Bilingual PT/EN interface with Crystal and Ghost visual modes, interactive gallery, keyboard navigation and reduced-motion support.
- React and TypeScript components, Cloudflare Workers publishing and automated type checks, tests and builds.

Education

Technology Degree in Internet Systems · Centro Universitário UNIESP · Completed in 2026.

Languages

Portuguese native · Basic English · Intermediate Spanish.
